WINDOWS

We can make many different types of windows. The two main types are below:-

Stormproof Windows

These windows are a modern variation of the traditional casement window. On a stormproof window the casement slightly overlaps when closed to ensure a completely water tight/weathertight fit. Stormproof windows are fitted with modern friction hinges as standard, these allow the window to stay open without the need for casement stays. Traditional stormproof hinges are also available but with this option you would need casement stays. Stormproof windows are fitted with espagnolette locking systems as

Flush Casement Windows

These windows are more traditional in design. Unlike stormproof windows the panes sit flush with the frame of the window when closed rather than overlapping. Our flush casement windows are fitted with heavy duty ball bearing butt hinges (stainless steel or brass PVD finish) and locking fasteners and casement stays.
See the website for more information on windows.

GLASS

All our doors are supplied with clear Planitherm toughened double glazed units as standard. Textured patterns, lead and opaque are also available see website.

FINISHES

Doors and windows can be supplied fully factory spray finished (stained or painted) using the Teknos system or we can apply a base coat and supply the top coat – see website for further information and more available colours.

GUIDE PRICES

There are prices for standard sized doors and frames on our downloadable brochures page.
